

- 1- First of all I draw a rectangle with size of 40\*30 meters and then offset it 10 meter to create the roof.

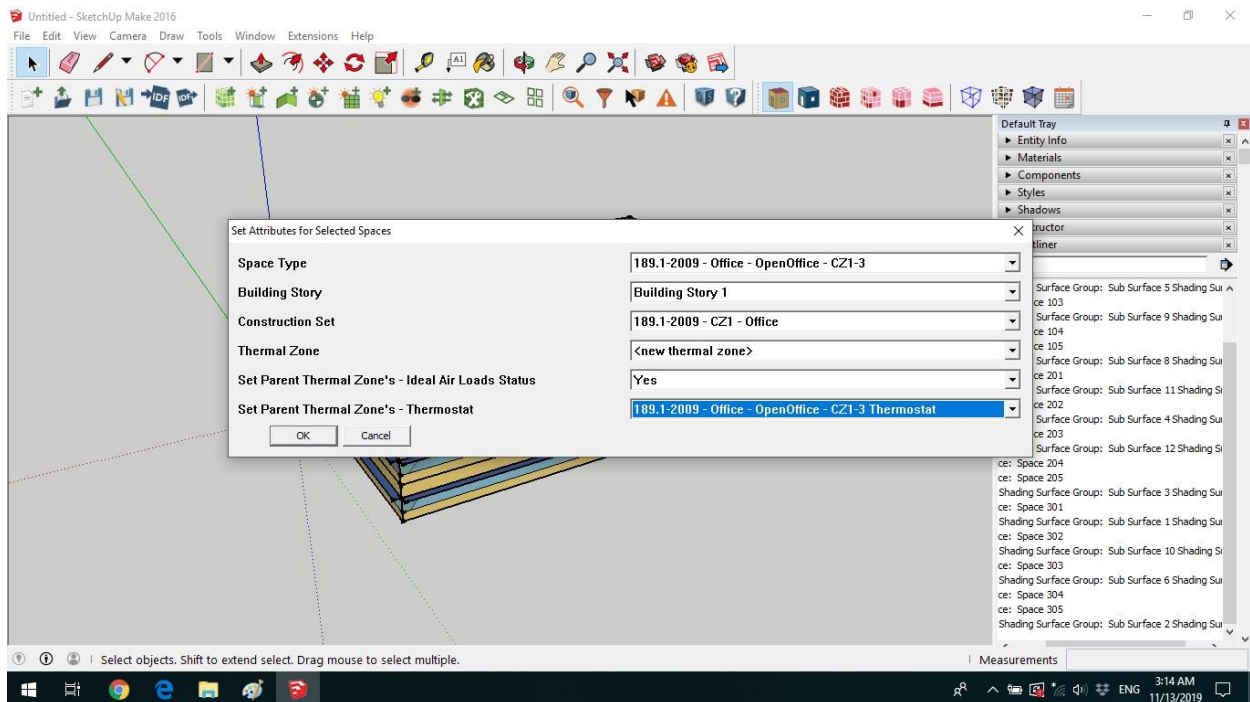

- 2- By clicking on the ( create spaces from diagram) I made the model with 3 levels and by clicking on the info I can get to know the different part of the building.

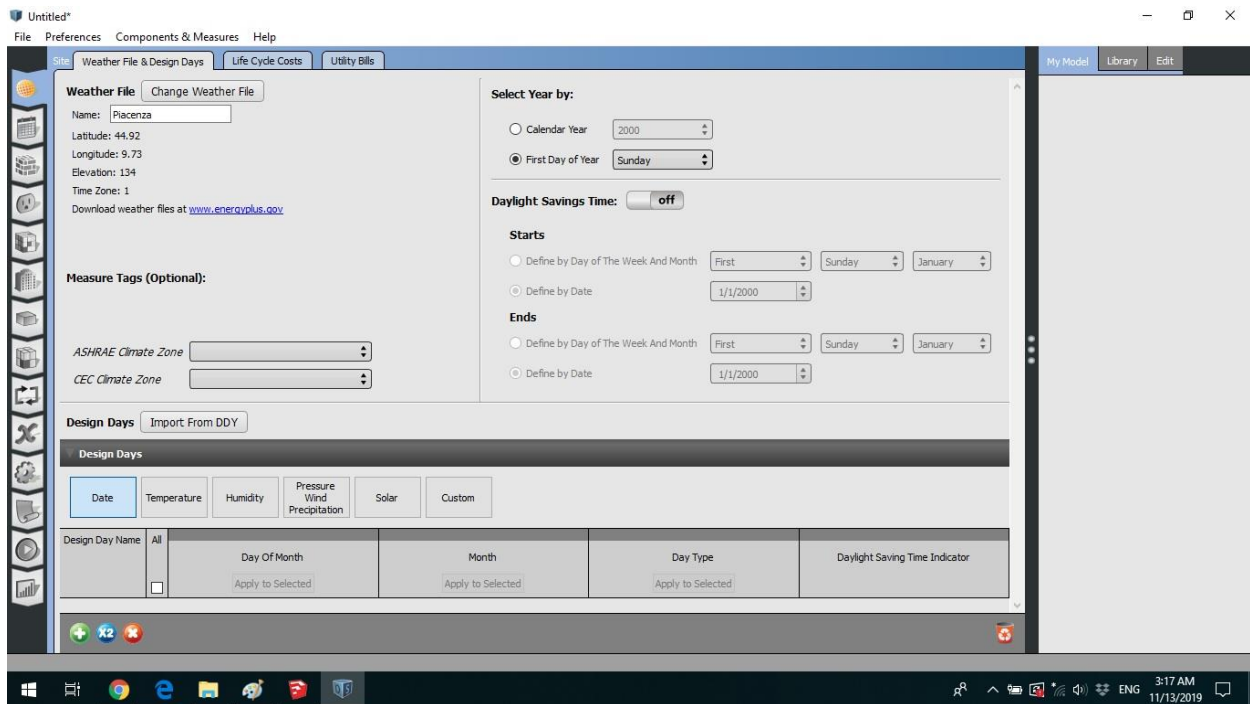

- 3- In this model, we need windows that's why I used open studio extension to put windows.

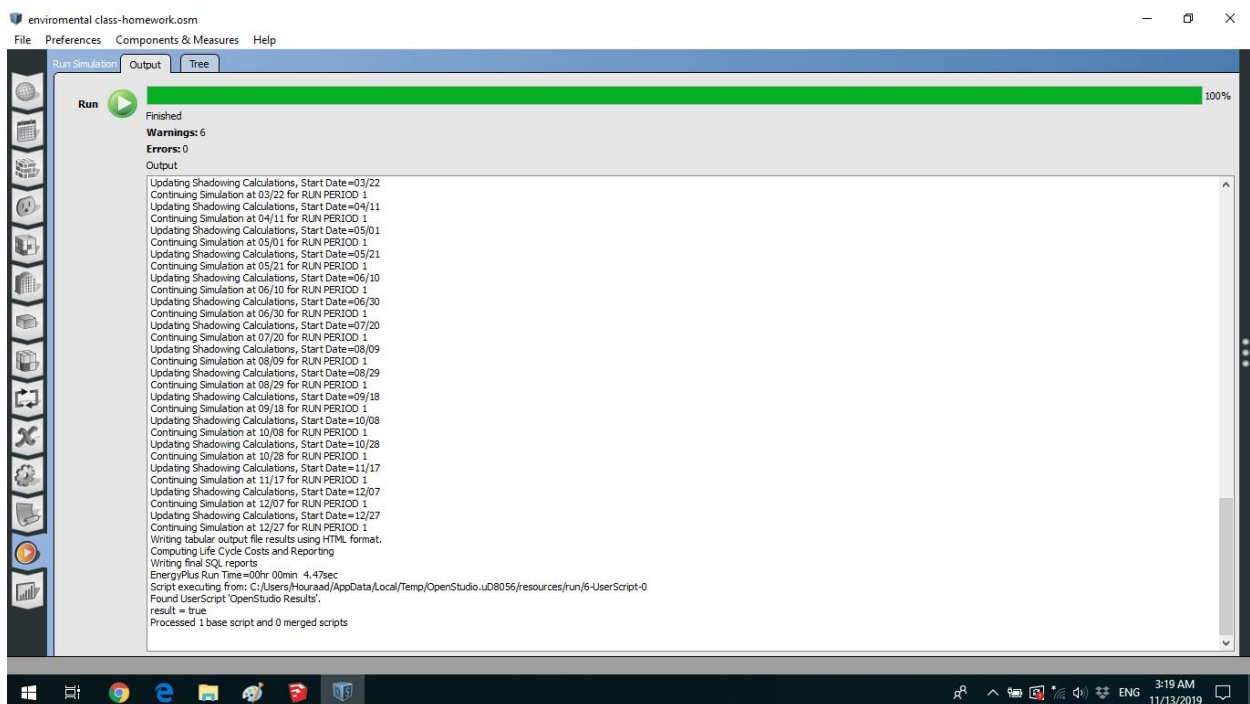

4- By clicking on the overhang I added my desired shading.

5- Now i choose the spaces of each thermal zone and added specifications.

6- after launching Openstudio using sketchUpNext I need to add the weather Data

7- easily I run the model and in the last tab I will see the results.
